

DRAFT TEXT OF THE EUROPEAN CITIZENS' INITIATIVE

Proposed Initiative under Article 11(4) TEU and Regulation (EU) 2019/788

TITLE OF THE INITIATIVE:

Creation of the Antikythera European Technology District for Sovereignty in Artificial Intelligence

SUBJECT MATTER:

Designation of Antikythera as a special digital and technology district of the EU to boost Artificial Intelligence development and guarantee European digital sovereignty through the assignment of the .ia ccTLD under the ISO 3166-1 standard.

MAIN OBJECTIVES:

Objective 1: Establishment of the Technology District

Establish the legal framework for a "European Technology District" in the region of Antikythera (Greece), intended to serve as the EU's reference hub for the ethical development of Artificial Intelligence, in line with the Digital Compass 2030 and the Union's industrial competitiveness goals.

Objective 2: Request for ISO Exceptional Reservation

Request the European Commission to initiate formal negotiations with the International Organization for Standardization (ISO) for the inclusion of Antikythera as an "Exceptional Reservation" in the ISO 3166-1 list. This measure is the indispensable technical requirement to activate the .ia code as a sovereign European asset, preventing its appropriation by interests external to the Union.

Objective 3: Technical Standardization and Regulatory Compliance

Harmonize technical standardization regulations between the Greek standardization body (ELOT) and European agencies (CEN/ETSI) to ensure that the district's digital infrastructure operates under the most demanding cybersecurity and data protection standards required by the EU AI Act, thus strengthening European technological sovereignty.

TREATY PROVISIONS (LEGAL BASIS):

- Article 11 TEU: Promotion of participatory democracy and citizen engagement.
- Article 173 TFEU: Improvement of the competitiveness of European industry.
- Articles 174 to 178 TFEU: Promotion of economic, social, and territorial cohesion, with special attention to island regions.
